

ABSTRACT OF THE DISCLOSURE

A flat cable (13) is formed by a plurality of juxtaposed conductors (15) which are insulated and coated. An end portion of the flat cable (13) is provided with
5 a terminal processing structure in which cut surfaces (15a, 15b) of the respective conductors (15) are alternately positioned in a staggered manner, thereby making it possible to lengthen the creeping distance between the cut surfaces of the adjacent conductors.
